SUMMARY

I build backend services and data systems for business-critical applications. I own API design, integration and production reliability, from rollout planning to monitoring and incident response.

WORK EXPERIENCE

TikTok, Global E-commerce Singapore | *Apr 2024 – Present*

Software Engineer II, AI Infrastructure (Promotion & Operations) *Oct 2025 – Present*

- Designed a Go analytics backend serving 26 statistics across eight dimensions in 13 markets from about **250M rows of subsidy data a day**, at p99 under 50 ms.
- Built a Go/gRPC rule engine that drops underperforming products from subsidy. In a Black Friday pilot, selected products drove **37% of pool sales value on 5% of pool subsidy spend**.
- Took over a budget proposal service peaking at 4.7K QPS with p99 under 100 ms and added new flows.
- Set up Hive data-quality and service monitoring that caught 14 data-delay risks before they hit users.
- Built a Go MCP server with 16 analysis tools on about 6B rows of daily experiment data, for a LangGraph agent platform used by **500+ operators and analysts**. Analysis fell from 5 minutes to under 30 seconds.

Software Engineer, Seller Center & Creator Marketplace *Apr 2024 – Oct 2025*

- Refactored the Creator Marketplace product search and product-detail services, which peak at **27K and 33K QPS**. Cut p99 and raised uptime while peak traffic grew about 5x in 2025.
- Owned Go/gRPC services for Seller Center and Creator Marketplace (about 7M daily users) through 30+ on-call incidents. Fixed recurring cache outages and made new regions a config change.
- Led backend delivery for Campaign Workbench V2 ahead of Black Friday, including staged rollout and peak-period support. The share of sellers monitoring live campaigns rose from 3.5% to 12%.
- Built the Free Sample recommendation algorithm in Go. In an A/B test, daily sample applications through its recommendations more than doubled from **103 to 215**.

Compoze, AI Assistants for Business Singapore | *Jan 2025 – Dec 2025*

Founder, sole engineer and sole salesperson *Alongside the TikTok role*

- Deployed a containerised Python/FastAPI assistant backend with retrieval and tools. A configurable model layer supported hosted and private endpoints without code changes.
- Owned sales, discovery and delivery. The client bought the assistant outright in December 2025.

Thought Machine Singapore | *May – Aug 2023*

Forward Deployment Engineer, Intern *Core banking (Vault)*

- Built a Python tool on the Vault REST API to preview and apply configuration fixes, saving 20+ client hours a week. Supported core-banking delivery and shadowed scoping meetings with DBS (PayLah).

EARLIER EXPERIENCE

Binance | *Software Engineering Intern, Frontend* *Aug – Nov 2023*
React, TypeScript | Payment checkout interfaces

Tanso, Munich | *Software Engineering Intern, Full Stack* *Jul – Dec 2022*
Next.js, tRPC, Prisma, PostgreSQL | Analytics dashboard

DBS Bank | *Software Engineering Intern, Backend* *May – Jul 2022*
Java, Spring Boot, MySQL | Backend services and scheduled automation

TECHNICAL SKILLS

Languages and APIs: Go, Python, Java, TypeScript, Spring Boot, gRPC, REST APIs

Data and messaging: SQL, MySQL, PostgreSQL, Redis, Kafka, Hive, Spark, ClickHouse

Infrastructure and practices: Docker, Kubernetes, AWS, Linux, CI/CD, monitoring, incident response

EDUCATION

Bachelor of Computing in Computer Science (Honours) Singapore
National University of Singapore *Aug 2020 – Dec 2023*

- NUS Overseas Colleges, Munich | President, NUS Fintech Society (230 members)
