Ong Jun Xiong

Singapore | *Software Engineer* | *Full Stack & Applied AI*

junxiongong2@gmail.com | junxiong.dev | github.com/ong6 | linkedin.com/in/junx6

SUMMARY

I build backend services and data systems for business-critical applications. I own API design, integration and production reliability, from rollout planning to monitoring and incident response.

WORK EXPERIENCE

TikTok, Global E-commerce Singapore | *Apr 2024 – Present*

Software Engineer II, AI Infrastructure (Promotion & Operations) *Oct 2025 – Present*

- Built a Go analytics backend on Kafka, Redis and Hive. It serves **26 statistics across eight dimensions in 13 markets**, refreshed hourly with automated risk alerts.
- Built a Go/gRPC rule service and React console with operations teams in the US, Southeast Asia and the UK. It enforces product eligibility and budget stop-loss automatically, replacing a daily manual review.
- Set up Hive data-quality checks, service monitoring and the on-call runbook, which caught 14 data-delay issues before they reached dashboards.
- Built a Go MCP server with 16 analysis tools over the data warehouse, for a LangGraph agent platform used by **500+ operators and analysts**. Analysis fell from 5 minutes to under 30 seconds.

Software Engineer, Creator Marketplace & Data Intelligence *Apr 2024 – Oct 2025*

- Owned Go/gRPC services for Creator Marketplace (about **7M daily users**) and seller analytics through **30+ on-call incidents**. Added cache monitoring and alerting that ended a recurring class of outages.
- Built recommendation backends in Go for creator-product matching, with candidate generation and personalised ranking, rolled out through A/B tests.
- Led backend delivery for Campaign Workbench V2 before Black Friday, including staged rollout and peak-traffic support.
- Shipped launches in Japan and Mexico with zero-downtime MySQL migrations, then reworked hard-coded region logic so new markets launch by config.

Compoze, AI Assistants for Business Singapore | *Jan 2025 – Dec 2025*

Founder, sole engineer and sole salesperson *Alongside the TikTok role*

- Deployed a containerised Python/FastAPI assistant backend with retrieval and tools. A configurable model layer supported hosted and private endpoints without code changes.
- Owned sales, discovery, delivery and staff training. The client bought the assistant at the end of 2025.

Thought Machine Singapore | *May – Aug 2023*

Forward Deployment Engineer, Intern *Core banking (Vault)*

- Built a Python tool on the Vault REST API to preview and apply configuration fixes, saving client teams 20+ hours a week. Supported core-banking delivery for a Singapore bank client.

EARLIER EXPERIENCE

Binance | *Software Engineering Intern, Frontend* *Aug – Nov 2023*
React, TypeScript | Payment checkout interfaces

Tanso, Munich | *Software Engineering Intern, Full Stack* *Jul – Dec 2022*
Next.js, tRPC, Prisma, PostgreSQL | Analytics dashboard

DBS Bank | *Software Engineering Intern, Backend* *May – Jul 2022*
Java, Spring Boot, MySQL | Backend services and scheduled automation

TECHNICAL SKILLS

Languages and APIs: Go, Python, Java, TypeScript, Spring Boot, gRPC, REST APIs

Data and messaging: SQL, MySQL, PostgreSQL, Redis, Kafka, Hive, Spark, ClickHouse

Infrastructure and practices: Docker, Kubernetes, AWS, Linux, CI/CD, monitoring, incident response

EDUCATION

Bachelor of Computing in Computer Science (Honours) Singapore
National University of Singapore *Aug 2020 – Dec 2023*

- NUS Overseas Colleges, Munich | President, NUS Fintech Society (230 members)
